SAR Image Report

Original SAR (not found - showing colorized preview)

Colorized

K-Means

Cluster Analysis:

Cluster 0: RGB(177, 175, 187) → 32.36%
Cluster 1: RGB(121, 131, 146) → 26.33%
Cluster 2: RGB(220, 223, 227) → 18.11%
Cluster 3: RGB(52, 89, 95) → 23.21%

Summary:

32.36% area → RGB(177, 175, 187)
26.33% area → RGB(121, 131, 146)
18.11% area → RGB(220, 223, 227)
23.21% area → RGB(52, 89, 95)

Recommendations:

The analysis shows dominant land cover is water (32.49664306640625%). Significant water presence suggests focusing on hydrological monitoring and flood risk assessment for the area. Secondary clusters show distributed variations; using time-series imagery would help confirm seasonal changes. Recommended actions: collect ground-truth samples where possible, prioritize monitoring based on dominant class, and re-run analysis after incorporating higher-resolution data or additional bands.
