# SAR Image Report

Original SAR (not found - showing colorized preview)

Colorized

K-Means

Cluster Analysis:

Cluster 0: Likely Vegetation (Green Tone)
Mean RGB: (31, 45, 38)
Area: 28.56% of image

Cluster 1: Likely Vegetation (Green Tone)
Mean RGB: (96, 112, 98)
Area: 26.07% of image

Cluster 2: Likely Vegetation (Green Tone)
Mean RGB: (143, 152, 138)
Area: 11.54% of image

Cluster 3: Likely Vegetation (Green Tone)
Mean RGB: (60, 79, 65)
Area: 33.83% of image

Summary

Land Cover Summary:
Likely Vegetation (Green Tone) → 28.56%
Likely Vegetation (Green Tone) → 26.07%
Likely Vegetation (Green Tone) → 11.54%
Likely Vegetation (Green Tone) → 33.83%

Recommendations:

The analysis shows dominant land cover is vegetation (33.79364013671875%). Strong vegetation signal suggests this area is suitable for agricultural monitoring — consider crop health and biomass monitoring. Secondary clusters show distributed variations; using time-series imagery would help confirm seasonal changes. Recommended actions: collect ground-truth samples where possible, prioritize monitoring based on dominant class, and re-run analysis after incorporating higher-resolution data or additional bands.
