SAR Image Report

Original SAR (not found - showing colorized preview)

Colorized

K-Means

Cluster Analysis:

Cluster 0: Likely Vegetation (Green Tone)
Mean RGB: (115, 118, 112)
Area: 32.49% of image

Cluster 1: Likely Vegetation (Green Tone)
Mean RGB: (46, 53, 52)
Area: 21.31% of image

Cluster 2: Likely Urban / Built-up (Bright/Gray)
Mean RGB: (158, 157, 151)
Area: 14.36% of image

Cluster 3: Likely Vegetation (Green Tone)
Mean RGB: (81, 86, 81)
Area: 31.84% of image

Summary

Land Cover Summary:
Likely Vegetation (Green Tone) → 32.49%
Likely Vegetation (Green Tone) → 21.31%
Likely Urban / Built-up (Bright/Gray) → 14.36%
Likely Vegetation (Green Tone) → 31.84%

Recommendations:

The analysis shows dominant land cover is vegetation (32.07550048828125%). Strong vegetation signal suggests this area is suitable for agricultural monitoring — consider crop health and biomass monitoring. Secondary clusters show distributed variations; using time-series imagery would help confirm seasonal changes. Recommended actions: collect ground-truth samples where possible, prioritize monitoring based on dominant class, and re-run analysis after incorporating higher-resolution data or additional bands.
